FINAL PROJECT REPORT

📜 Title Page

Name: Mahi
Registration Number: (Your Reg No.)
Branch: Computer Science
Year: 1st Year
Course Code: CSE0001
Course Title: Digital Literacy
Date: (Submission Date)

Introduction

This project was completed as part of the Digital Literacy course to understand the importance of using digital tools effectively and responsibly. As a Student Digital Ambassador, the goal was to explore different aspects of digital literacy such as online safety, professional communication, digital presence, and cybercrime awareness.

The project included five tasks that focused on practical applications of digital skills. These tasks helped in understanding how to create informative content, build a professional online profile, use collaboration tools, communicate effectively, and stay safe online.

Overall, this project provided valuable knowledge about digital responsibility and the importance of being aware and careful while using digital technologies in academic and everyday life.

Task 1: Infographic

For Task 1, I created a digital literacy infographic using Canva. The infographic covered important topics such as the meaning of digital literacy, useful digital tools for students, safe internet practices, and email etiquette. Canva was chosen because it offers easy-to-use templates and design elements that help create visually appealing content.

The infographic highlights how students can use tools like Google Docs, GitHub, and Canva for academic purposes. It also includes tips for staying safe online, such as avoiding suspicious links and using strong passwords. Additionally, it explains basic email etiquette like writing clear subject lines and maintaining a professional tone.

The most interesting part of this task was designing and organizing the content in a visually effective way. The main challenge was keeping the design simple while including all key information. This task improved my creativity and understanding of how to present information clearly.

Task 2: Digital Portfolio

In Task 2, I created and updated my digital presence on platforms such as GitHub, LinkedIn, and HackerRank. These platforms are important for building a professional profile and showcasing skills.

On GitHub, I created a profile README that includes my name, branch, year, and learning goals. This helps present my profile in a structured and professional manner. On LinkedIn, I added my educational details, including my degree and university, which is essential for networking and future career opportunities. I also explored HackerRank, which is useful for practicing coding and improving problem-solving skills.

Each platform serves a unique purpose. GitHub is used for showcasing projects, LinkedIn is used for professional networking, and HackerRank is used for skill development. In the future, I plan to use these platforms regularly to build projects, participate in coding challenges, and connect with professionals. This task helped me understand the importance of maintaining a strong digital presence.

Task 3: Platforms

For Task 3, I explored both coding practice and collaboration platforms. I used HackerRank to solve a beginner-level problem, which helped me understand basic programming concepts and improve my problem-solving skills.

In addition, I created a Google Form titled “Digital Literacy Awareness Quiz” with five questions related to digital literacy, online safety, and email etiquette. The quiz included both multiple-choice and short-answer questions. I also observed how responses are automatically collected and organized in Google Sheets.

This task helped me understand how digital tools can be used for learning, collaboration, and data collection. HackerRank is useful for improving coding skills, while Google Forms is effective for conducting quizzes and surveys. In the future, I plan to use these tools for academic projects and practice coding regularly. This task enhanced my technical and organizational skills.

Task 4: Email Etiquette

In Task 4, I learned about professional communication through email writing and responsible social media usage. I wrote two formal emails: one requesting an assignment extension and another applying for an internship opportunity. Both emails followed proper structure with clear subject lines, polite tone, and professional closing.

I also created a checklist of do's and don'ts for social media usage. This helped me understand how online behavior can affect a student's image.

A common example of poor communication is sending emails without a proper subject or using informal language. This can create confusion and leave a negative impression. Such issues can be avoided by maintaining clarity, professionalism, and respect in communication.

Task 5: Cybercrime

In Task 5, I studied phishing as a common cybercrime and learned how attackers trick users into sharing sensitive information through fake messages or websites. One surprising aspect was how real these fake messages can look, making it difficult to identify scams.

This task helped me understand the importance of being cautious while using digital platforms. I learned that clicking unknown links or sharing personal information can lead to serious consequences like financial loss or identity theft.

As a result, I will be more careful online and always verify information before taking action. I will also use strong passwords and enable additional security measures.

Conclusion

This project helped me understand the importance of digital literacy in today's world. Through different tasks, I learned how to use digital tools effectively, communicate professionally, and stay safe online. I also developed awareness about cyber threats and preventive measures.

Each task provided practical knowledge that will be useful in my academic journey and future career. Overall, this project improved my digital skills and made me more responsible while using technology.
